Introduction

Our color palette is inspired by nature, our environments, and technology:
Evergreen, **Urgency Green**, **Day** and **Night**.

Evergreen	Urgency Green	Day	Night
Evergreen, our signature color, is a blend of blue and green, reflecting the natural hues of the Earth. 	Urgency Green is a vibrant signal of change and symbol of energy. It is also a nod to one of our top priorities: safety. 	Day is foundational in bringing the feeling of energy to everything we do. Day serves as a serene backdrop to Evergreen. 	Night represents our relentless commitment and unwavering dedication to change. Night enhances the palette with depth and elegance. 

Color palette: Primary

At the core of our visual identity system is the color palette. Proper and consistent use of the primary colors will create a strong visual link across all communications.

Usage:

The primary palette consisting of **Evergreen** and **Day** should be the predominant colors in any layout. **Urgency Green** and **Night**, however, should be used selectively and strategically. Use Urgency Green from our primary accent palette to add emphasis, highlight a strategic statistic, or draw the eye to optimize visual impact. Do not use Urgency Green for body copy. Night should also be used sparingly in large blocks of color, ensuring the palette does not become too tonally dark or heavy.

Pantone colors and CMYK values are only for print applications. Use the RGB values and/or hex codes for all digital applications.

For paint colors, color-matched materials, and finishes, please reference the *Environmental Branding Guidelines*.

Primary palette

Evergreen		Day	
Pantone		Pantone	
7721 C		N/A	
CMYK		CMYK	
94/12/43/49		0/0/0/0

CMYK	Hex	CMYK	Hex
34/0/95/0	#C8FF08	60/40/40/100	#212121

Color proportions

While the full primary color palette is available to use, keep in mind these color proportions in your designs.

A predominant portion of our colors and layouts will consist of **Day** and **Evergreen**, while **Night** and **Urgency Green** play supporting roles.

Color palette: Secondary

Usage:
Utilize our **Evergreen tint palette** strategically to enhance our signature color, Evergreen, without overpowering or replacing it.

Use our **secondary palette** sparingly as an alternative background color option to Day and Night, ensuring adequate contrast between the primary and secondary palettes when used together.

The **tertiary palette** is intended for **limited digital (web and PowerPoint presentations) use** and may only be employed to differentiate complex segments and data visualizations in charts and graphs **once the primary and Evergreen tint palettes are fully utilized**. Do not use the secondary palette for data visualizations. Refer to the *Charts and graphs: Color* section for detailed usage guidance.

Evergreen tint palette

Dark Evergreen	Evergreen Tint 1	Evergreen Tint 2	Evergreen Tint 3
CMYK 100/48/65/43	CMYK 74/30/45/5	CMYK 42/13/24/0	CMYK 21/6/12/0
RGB 0/71/69	RGB 69/138/138	RGB 150/189/189	RGB 199/219/219
Hex #004745	Hex #458A8A	Hex #96BDBD	Hex #C7DBDB

Secondary palette

Gray 1	Gray 2	Gray 3	Gray 4	Gray 5
CMYK 0/0/0/2	CMYK 0/0/0/11	CMYK 0/0/0/20	CMYK 0/0/0/59	CMYK 0/0/0/72
RGB 250/250/250	RGB 227/227/227	RGB 204/204/204	RGB 105/105/105	RGB 72/72/72
Hex #FAFAFA	Hex #E3E3E3	Hex #CCCCCC	Hex #696969	Hex #484848

Tertiary palette

RGB 33/118/255	RGB 95/183/255	RGB 62/158/0	RGB 123/221/60	RGB 74/36/25	RGB 119/73/54
Hex #2176FF	Hex #5FB7FF	Hex #3E9E00	Hex #7BDD3C	Hex #4A2419	Hex #774936

RGB-first

GE Vernova emphasizes the vibrant and energetic qualities of our RGB color values, which are designed for digital displays. While these colors may not be precisely replicated in print, they reflect our commitment to a dynamic and bold expression.

Our brand is designed to stand out and signal change in our industry—especially with **Urgency Green**—and changing RGB values to account for print and general CMYK standards dilutes our ambition to represent bold progress and change through bright, eye-catching colors.

Although print remains significant, digital interactions like presentations, social channels, and digital ads are increasingly central. We’ve chosen Pantone and CMYK values to closely match our digital colors, ensuring consistency across different formats.

Digital conditions

Print conditions

RGB vs. CMYK

To make sure our colors appear as intended in all applications, **it is critical to understand the difference between RGB and CMYK.**

RGB and CMYK are two different color system technologies. RGB is used for digital displays like computer screens, while CMYK is used for printing on paper. It's important to use the right color mode because converting between the two can change how colors appear.

In addition to RGB and CMYK, there is the Pantone color matching system. Pantone (PMS) color swatches represent physical inks that are used for printing as spot colors. Pantone swatch books print with greater consistency.

Be aware that RGB colors may look different on various monitors due to factors like color gamut, calibration, and viewing angle. Similarly, CMYK colors can vary with different printing methods, ink types, and printer settings. Even with identical CMYK values, paper quality, environmental conditions, and printer calibration can affect color output.

Given this reality, we have chosen color values within each of the color modes so colors remain as consistent as possible within that color mode. In cases of extreme color shift, the Pantone chip should be used as a target.

How to print: Urgency Green

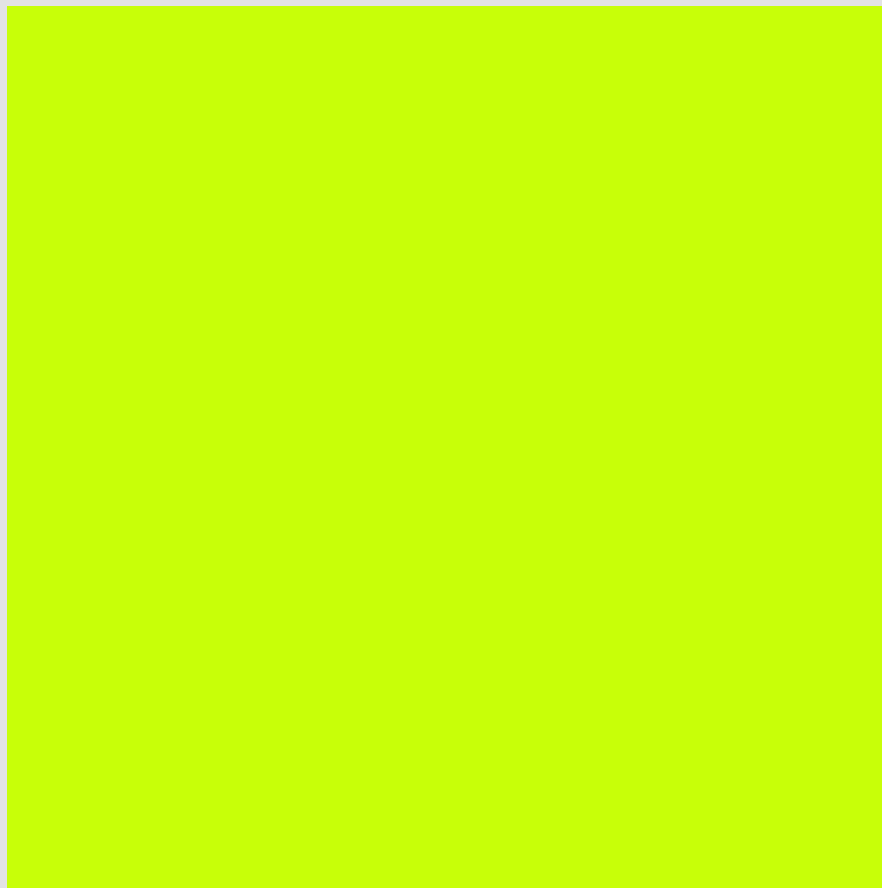

Urgency Green plays an important role in our color palette as a vibrant signal of change and a symbol of energy.

While this vivid color appears crisp in digital environments, it can be challenging to print without the help of a professional printer using a high gamut output or using a spot color.

When printing, it is preferred to use Pantone color when possible.

In the circumstance that a document must be printed in CMYK, **limit the use of Urgency Green** and instead prioritize the remainder of the primary color palette: Evergreen, Day, and Night.

Note: All colors displayed on screen are **NOT** how they will appear when printed. Use these numbers and colors as general reference while aiming for the ideal printing outcome.

Color combinations:

Primary palette

We combine specific typography colors with different background colors. Use only the combinations to the right for optimal legibility and visual consistency.

Colors have been tested for ADA compliance WCAG 2.0 Level AA and AAA.*

Text size specifications:

Large text
WCAG defines large text as text that is 18 pt (24 px) and larger, or 14 pt (18.67 px) and larger if it is bold.

Normal text
There is no strict specification for normal text, however 12 pt (16 px) text is recommended for body copy while smaller text may be no smaller than 9 pt (12 px).

**ADA compliance tests text legibility in website applications. ADA is the acronym for the Americans with Disabilities Act, which prohibits discrimination against people with disabilities—ensuring adequate accessibility online for all.*

Preferred, primary color combinations

ON EVERGREEN,
TYPOGRAPHY IS DAY
OR URGENCY GREEN

Day	Urgency Green
Normal Text AAA Pass	Normal Text AA Pass
Large Text AAA Pass	Large Text AAA Pass

ON DAY, TYPOGRAPHY
IS EVERGREEN OR NIGHT

Night	Evergreen	Urgency Green
Normal Text AAA Pass	Normal Text AAA Pass	Normal Text Doesn't pass
Large Text AAA Pass	Large Text AAA Pass	Large Text AA Pass

Note: Urgency Green may also be used on Day as a hero graphic; see the Typography section for more detail.

Secondary color combinations

ON URGENCY GREEN,
TYPOGRAPHY IS
EVERGREEN OR NIGHT

Night	Evergreen
Normal Text AAA Pass	Normal Text AA Pass
Large Text AAA Pass	Large Text AAA Pass

Note: Color combinations demonstrate ADA compliance only; refer to the *Color proportions* section above for usage guidance.

ON NIGHT, TYPOGRAPHY
IS DAY OR URGENCY GREEN

Day	Urgency Green
Normal Text AAA Pass	Normal Text AAA Pass
Large Text AAA Pass	Large Text AAA Pass

Color combinations: Secondary palette

When using typography on our secondary palette, use only the combinations on the right for optimal legibility and visual consistency.

In printed materials, Day and Gray 1 and 2 are permissible for light background colors, whereas Night is recommended for dark background colors. **Do not use Gray 3, 4, or 5** as background colors in printed formats.

Don'ts

Evergreen and our other brand colors are essential elements of our visual identity. The following are some examples of possible misuse:

- 1. Do not place any typography, logo lock-ups, or any other elements across mixed-color backgrounds
- 2. Do not use colors outside the approved palette
- 3. Do not use color gradients
- 4. Do not use Evergreen or Urgency Green for body copy
- 5. Do not use the secondary palette for anything other than backgrounds or small design elements
- 6. Do not use more than two colors for backgrounds in a single layout
- 7. Do not use CMYK values in RGB color mode
- 8. Do not use combinations that result in poor contrast
- 9. Do not use the tertiary palette for any design elements except charts and graphs
